PROTECTING PEOPLE AND THE WORLD WE LIVE IN

One wipe can last for up to 4 weeks and as part of a general cleaning regime **ProGuard + Sanitising Wipes** will reduce the amount of products used, save time and provide protection against the passing of infections.

Using our Electrostatic methodology, **ProGuard + Sanitising Wipes** coat all surfaces removing the BioFilm and protecting the surface from further contamination.

Use **ProGuard + Sanitising Wipes** for virus removal on handrails, food surfaces and touch screens.

# ProGuard+

CLEANING & BIOFILM PROTECTION

Up to 4 weeks  
bacteria  
prevention

**ProGuard +** Provides an ATP Cleaning System incorporating a scientific approach used by hospitals and food manufacturers to ensure consistent standards of cleanliness. This method measures the amount of Adenosine Triphosphate on a surface usually referred to as 'ATP', including proteins which support the growth of bacteria. **ProGuard +** disrupts the ATP and BioFilm that bacteria needs to survive.

Test to EN13697 & EN1276 by Cheshire Scientific

Safe on all types of surfaces - metal, wood, plastic, fabric, glass, marble, granite etc, the list is endless.

Available in tubs of 150.
